Xtralis ADPRO Video Alarm Verification and Interaction

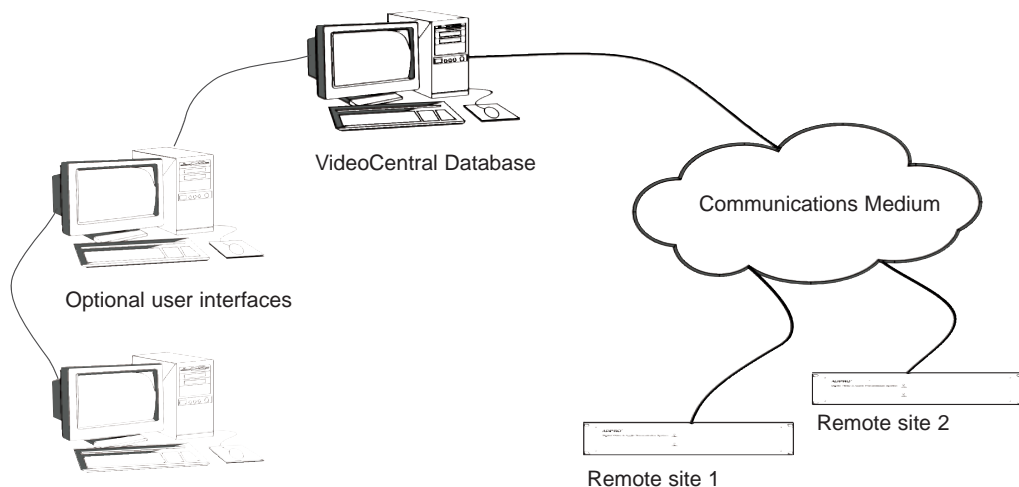

The Xtralis ADPRO Solution is specifically designed as the ultimate multi-site security and surveillance system, with the flexibility to deliver remote monitoring over a wide range of communication medium.

The automatic transmission of alarm images can be programmed to activate on events, scene activity or panic and intrusion alarms. These images enable the alarm cause to be verified by the monitoring station and the appropriate response undertaken. The alarm images can be selected for printing or emailing as required. In addition, the Xtralis ADPRO Solution can provide:

- **Offsite video monitoring;** allowing the operator to verify an alarm and respond immediately to prevent events escalating.
- **Two way, interactive audio;** enabling operators to interact with visitors and is particularly effective in unmanned site applications.
- Virtual guard tour; providing a more efficient guard patrol without the high costs.
- **Multiple event screening;** overseeing delivery of valuable merchandize while still monitoring staff.
- **Full remote control of third party equipment;** permitting entry into restricted areas via electronically operated devices, such as a gate, thus reducing the need for on site guards.
- **Monitoring of System integrity;** featuring low and high contrast alarms, HDD temperature alarm, primary and backup communication lines and watermarking.

Benefits of Video Alarm Verification

- ▶ Earliest indication of an event
- ▶ Accurately and quickly verify a situation
- ▶ Determine appropriate action to minimize loss
- ▶ Interact and take control of circumstances

VideoCentral Gold Software

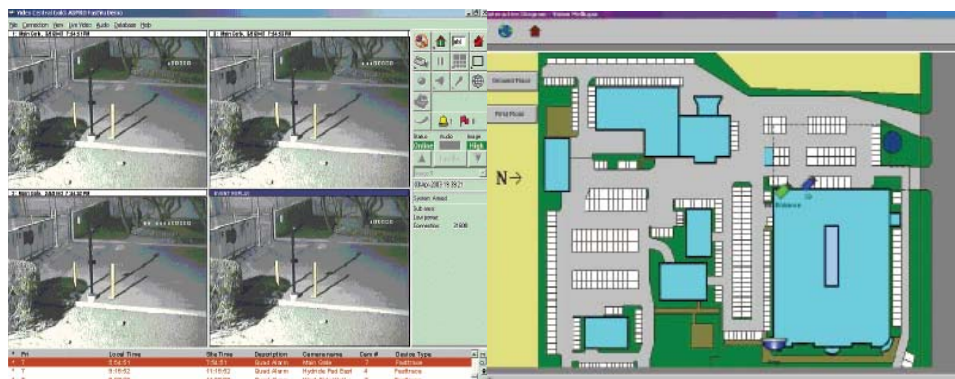

Solutions... Designed with the Operator in mind

The Xtralis ADPRO VideoCentral Gold video management software is installed in a variety of Central Monitoring Stations (CMS) worldwide. Offering true multi-operator shared database operation and much more. With over 15 years of global CMS customer input, including "ease of use" as a consistent development goal, Xtralis has been able to deliver a mature and proven solution.

- Alarm images are presented to operators in a simple quad screen view, including an event replay window. The operator can quickly, easily, and accurately assess what caused an alarm and respond accordingly. VideoCentral Gold management software is able to capture and present alarms to operators eliminating the need to search back in time to find the alarm images. Multiple alarm images from the same or different sites are easily accessed and managed.
- eliminates the need and delays associated with a second telephone line. The operator can instantaneously intervene an event by broadcasting a live message to a site. Audio has proven to be an effective control mechanism to prevent an event from escalating to a major incident eg. to warn off a potential intruder.
- eliminate the need for an operator to be familiar with every site. The operator controls the site remotely via the powerful interactive maps to select cameras, areas of intrusion and intruder movement direction.
- All Xtralis ADPRO products support multiple communication media, from phone lines to high speed ethernet connections.

Benefits of Central Monitoring Stations

- ▶ Early Intervention
- ▶ Reduction in the cost of guard deployment
- ▶ Allows for improved guard efficiencies
- ▶ Visual verification of alarms

intervene

Xtralis ADPRO technology is continuously in the forefront of video transmission technology and remains the market leader for centralized remote site protection and control.

Xtralis ADPRO meets the needs of today's Video Monitoring Stations

- Proven in over 40,000 sites
- Easy integration with alarm automation packages
- Operator friendly
- Works with a variety of transmission modes including telephone lines, LAN/WAN, xDSL and Satellite
- Immediate alarm/event verification
- Interactive Maps
- Event Log History

Xtralis is a global organization committed to providing intelligent and sophisticated products and services that significantly enhance the safety and security of its customers. Advanced smoke detection, security technologies and superior voice alarm products and services position Xtralis as a leading supplier of innovative solutions for global industry application.
